If you perform maintenance yourself, be sure to follow the correct procedures as given in these sections.

Items		Parts and tools
Battery condition	(→P. 345)	Warm waterBaking sodaGreaseConventional wrench (for terminal clamp bolts)
Brake fluid level	(→P. 343)	 FMVSS No.116 DOT 3 or SAE J1703 brake fluid Rag or paper towel Funnel (used only for adding brake fluid)
Engine coolant level	(→P. 341)	"Toyota Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite and non-borate coolant with long-life hybrid organic acid technology. For the U.S.A.: "Toyota Super Long Life Coolant" is pre-mixed with 50% coolant and 50% deionized water. For Canada: "Toyota Super Long Life Coolant" is pre-mixed with 55% coolant and 45% deionized water. Funnel (used only for adding engine coolant)
Engine oil level	(→P. 337)	"Toyota Genuine Motor Oil" or equivalent Rag or paper towel, funnel (used only for adding oil)

Items		Parts and tools
Fuses	(→P. 369)	Fuse with same amperage rating as original
Radiator and condenser (→P. 342)		_
Tire inflation pressure (→P. 358)		Tire pressure gauge Compressed air source
Washer fluid	(→P. 347)	Water washer fluid containing antifreeze (for winter use) Funnel

A CAUTION

The engine compartment contains many mechanisms and fluids that may move suddenly, become hot, or become electrically energized. To avoid death or serious injury observe the following precautions.

When working on the engine compartment

- Keep hands, clothing, and tools away from the moving fan and engine drive belt.
- Be careful not to touch the engine, radiator, exhaust manifold, etc. right after driving as they may be hot. Oil and other fluids may also be hot.
- Do not leave anything that may burn easily, such as paper or rags, in the engine compartment.
- Do not smoke, cause sparks or expose an open flame to fuel or the battery. Fuel and battery fumes are flammable.
- Be extremely cautious when working on the battery. It contains poisonous and corrosive sulfuric acid.
- Take care because brake fluid can harm your hands or eyes and damage painted surfaces.
 - If fluid gets on your hands or in your eyes, flush the affected area with clean water immediately.

If you still experience discomfort, see a doctor.

■ When working near the electric cooling fans or radiator grille

Be sure the engine switch is OFF. With the engine switch in the "ON" position, the electric cooling fans may automatically start to run if the air conditioning is on and/or the coolant temperature is high. (\rightarrow P. 342)

Safety glasses

Wear safety glasses to prevent flying or falling material, fluid spray, etc. from getting in the eyes.

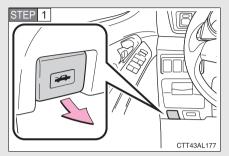

NOTICE

■ If you remove the air cleaner

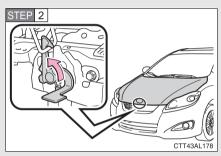

Driving with the air cleaner removed may cause excessive engine wear due to dirt in the air. Also, a backfire could cause a fire in the engine compartment.

Release the lock from the inside of the vehicle to open the hood.

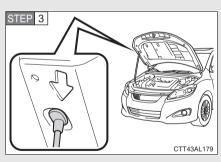

Pull the hood release lever.

The hood will pop up slightly.

Lift the auxiliary catch lever and lift the hood.

Hold the hood open by inserting the supporting rod into the slot.

A CAUTION

Pre-driving check

Check that the hood is fully closed and locked.

If the hood is not locked properly, it may open while the vehicle is in motion and cause an accident, which may result in death or serious injury.

After installing the support rod into the slot

Make sure the rod supports the hood securely from falling down on to your head or body.

NOTICE

When closing the hood

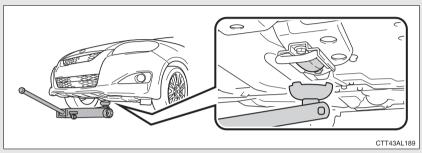

Be sure to return the support rod to its clip before closing the hood. Closing the hood with the support rod up could cause the hood to bend.

4-3. Do-it-yourself maintenance Positioning a floor jack

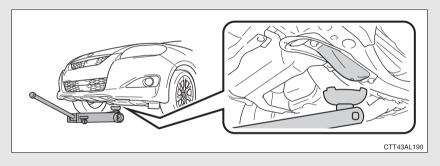

When raising your vehicle with a floor jack, position the jack correctly. Improper placement may damage your vehicle or cause injury.

■ Front

▶ 1.8 L 4-cylinder (2ZR-FE) engine

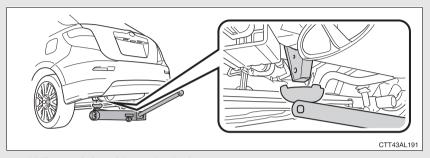

▶ 2.4 L 4-cylinder (2AZ-FE) engine

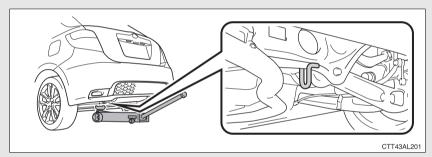

■ Rear

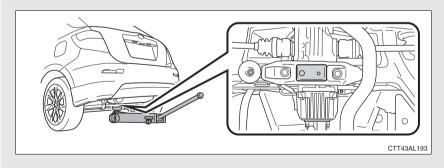

▶ 2WD models without 18-inch tires

▶ 2WD models with 18-inch tires

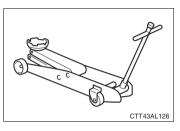

► AWD models

A CAUTION

When raising your vehicle

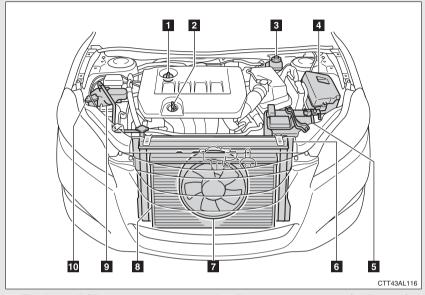

Make sure to observe the following to reduce the possibility of death or serious injury.

Lift up the vehicle using a floor jack such as the one shown in the illustration.

- When using a floor jack, follow the instructions of the manual provided with the jack.
- Do not use the jack that was supplied with your vehicle.
- Do not put any part of your body or get underneath the vehicle supported only by the floor jack.
- Always use floor jack and/or automotive jack stands on a solid, flat, level surface.
- Do not start the engine while the vehicle is supported by the floor jack.
- Stop the vehicle on level firm ground, firmly set the parking brake and put the shift lever in P (automatic transmission) or R (manual transmission).
- Make sure to set the floor jack properly at the jack point. Raising the vehicle with an improperly positioned floor jack will damage the vehicle and may cause the vehicle to fall off the floor jack.
- Do not raise the vehicle while someone is in the vehicle.
- When raising the vehicle, do not place any objects on top of or underneath the floor jack.

▶ 1.8 L 4-cylinder (2ZR-FE) engine

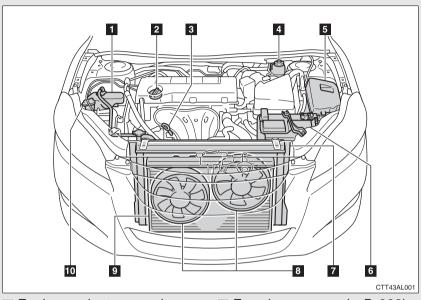

- 1 Engine oil filler cap
 - (→P. 339)
- 2 Engine oil level dipstick
 - (→P. 337)
- Brake fluid reservoir
 - (→P. 343)
- **4** Fuse box (→P. 369)

- 5 Battery (→P. 345)
- **6** Radiator $(\rightarrow P. 342)$
- Electric cooling fan
- **8** Condenser (→P. 342)
- 9 Engine coolant reservoir

 (→P. 341)
- Washer fluid tank (→P. 347)

▶ 2.4 L 4-cylinder (2AZ-FE) engine

Engine coolant reservoir

(→P. 341)

- 2 Engine oil filler cap (→P. 339)
- 3 Engine oil level dipstick (→P. 337)
- Brake fluid reservoir (→P. 343)

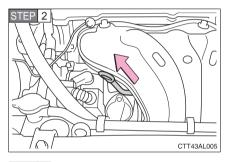

- **5** Fuse box (→P. 369)
- **6** Battery (→P. 345)
- **7** Radiator (→P. 342)
- B Electric cooling fans
- 9 Condenser (→P. 342)
- 10 Washer fluid tank (→P. 347)

Engine oil

With the engine at operating temperature and turned off, check the oil level on the dipstick.

■ Checking the engine oil

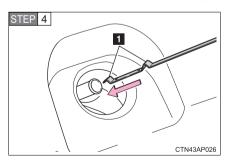

Park the vehicle on level ground. After warming up the engine and turning it off, wait more than 5 minutes for the oil to drain back into the bottom of the engine.

Hold a rag under the end and pull the dipstick out.

STEP 3 Wipe the dipstick clean.

- ▶ 1.8 L 4-cylinder (2ZR-FE) engine with flat dipstick and 2.4 L 4-cylinder (2AZ-FE) engine
- STEP 4 Reinsert the dipstick fully.
- ▶ 1.8 L 4-cylinder (2ZR-FE) engine with non-flat dipstick

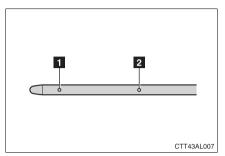

Reinsert the non-flat dipstick fully with its protruding areas (11 in the illustration) pointing towards the engine.

Holding a rag under the end, pull the dipstick out and check the oil level.

STEP 6 Wipe the dipstick and reinsert it fully.

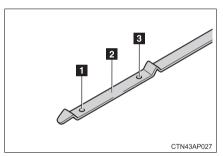

▶ 1.8 L 4-cylinder (2ZR-FE) engine with flat dipstick

2 Full

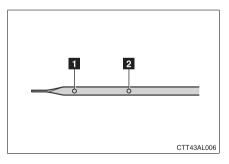

1 Low

▶ 1.8 L 4-cylinder (2ZR-FE) engine with non-flat dipstick

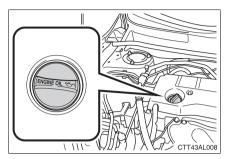

- 1 Low
- Measuring side
- 3 Full

▶ 2.4 L 4-cylinder (2AZ-FE) engine

- 1 Low
- 2 Full

■ Adding engine oil

If the oil level is below or near the low level mark, add engine oil of the same type as already in the engine.

Make sure to check the oil type and prepare the items needed before adding oil.

Engine oil selection	→P. 443
Oil quantity (Low → Full)	 ▶ 1.8 L 4-cylinder (2ZR-FE) engine 1.6 qt. (1.5 L, 1.3 lmp. qt.) ▶ 2.4 L 4-cylinder (2AZ-FE) engine 1.1 qt. (1.0 L, 0.9 lmp. qt.)
Items	Clean funnel

STEP 1 Remove the oil filler cap.

STEP 2 Add engine oil slowly, checking the dipstick.

STEP 3 Install the filler cap, turning it clockwise.

■ Engine oil consumption

A certain amount of engine oil will be consumed while driving. In the following situations, oil consumption may increase, and engine oil may need to be refilled in between oil maintenance intervals.

- When the engine is new, for example directly after purchasing the vehicle or after replacing the engine
- If low quality oil or oil of an inappropriate viscosity is used
- 2.4L 4-cylinder (2AZ-FE) engine: When driving at high engine speeds or with a heavy load, when towing, or when driving while accelerating or decelerating frequently

- ■1.8L 4-cylinder (2ZR-FE) engine: When driving at high engine speeds or with a heavy load, or when driving while accelerating or decelerating frequently
- When leaving the engine idling for a long time, or when driving frequently through heavy traffic

A CAUTION

Used engine oil

- Used engine oil contains potentially harmful contaminants which may cause skin disorders such as inflammation or skin cancer, so care should be taken to avoid prolonged and repeated contact. To remove used engine oil from your skin, wash thoroughly with soap and water.
- Dispose of used oil and filters only in a safe and acceptable manner. Do not dispose of used oil and filters in household trash, in sewers or onto the ground. Call your Toyota dealer, service station or auto parts store for information concerning recycling or disposal.
- Do not leave used engine oil within the reach of children.

NOTICE

■To prevent serious engine damage

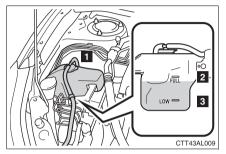

Check the oil level on a regular basis.

When replacing the engine oil

- Be careful not to spill engine oil on the vehicle components.
- Avoid overfilling, as the engine could be damaged.
- Check the oil level on the dipstick every time you refill the vehicle.
- Be sure the engine oil filler cap is properly tightened.

Engine coolant

The coolant level is satisfactory if it is between the "FULL" and "LOW" lines on the reservoir when the engine is cold.

- Reservoir cap
- 2 "FULL"
- 3 "LOW"

If the level is on or below the "LOW" line, add coolant up to the "FULL" line. (→P. 430)

■ If the coolant level drops within a short time after replenishing

Visually check the radiator, hoses, coolant reservoir cap, radiator cap, drain cock and water pump.

If you cannot find a leak, have your Toyota dealer test the cap and check for leaks in the cooling system.

■ Coolant selection

Only use "Toyota Super Long Life Coolant" or similar high quality ethylene glycol based non-silicate, non-amine, non-nitrite, and non-borate coolant with long-life hybrid organic acid technology.

"Toyota Super Long Life Coolant" is a mixture of 50% coolant and 50% deionized water. (Enabled: -31°F [-35°C])

Canada: "Toyota Super Long Life Coolant" is a mixture of 55% coolant and 45% deionized water. (Enabled: -44°F [-42°C])

For more details about engine coolant, contact your Toyota dealer.

A CAUTION

When the engine is hot

Do not remove the coolant reservoir cap.

The cooling system may be under pressure and may spray hot coolant if the cap is removed, causing serious injuries, such as burns.

NOTICE

When adding engine coolant

Coolant is neither plain water nor straight antifreeze. The correct mixture of water and antifreeze must be used to provide proper lubrication, corrosion protection and cooling. Be sure to read the antifreeze or coolant label.

If you spill coolant

Be sure to wash it off with water to prevent damage to parts or paint.

Radiator and condenser

Check the radiator and condenser and remove any foreign objects. If any of the above parts are extremely dirty or you are not sure of their condition, have your vehicle checked by your Toyota dealer.

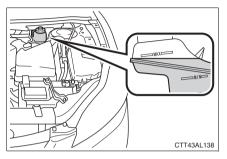

A CAUTION

When the engine is hot

Do not touch the radiator or condenser, as they may be hot and may cause serious injuries, such as burns.

Brake fluid

■ Checking fluid level

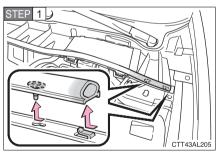

The brake fluid level should be between the "MAX" and "MIN" lines on the tank.

Make sure to check the fluid type and prepare the necessary items.

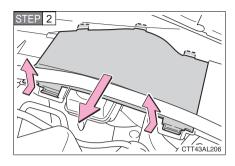

Adding fluid

Make sure to check the fluid type and prepare the necessary items.

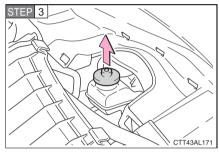

Fluid type	FMVSS No.116 DOT 3 or SAE J1703 brake fluid
Items	Clean funnel

Slide and lift up the rubber strip to partly remove it as shown.

Disconnect the claws and remove the service cover.

Remove the reservoir cap.

STEP 4 Add brake fluid slowly while checking the fluid level.

■ Brake fluid can absorb moisture from the air

Excess moisture in the fluid can cause a dangerous loss of braking efficiency. Use only newly opened brake fluid.

A CAUTION

When filling the reservoir

Take care because brake fluid can harm your hands or eyes and damage painted surfaces.

If fluid gets in your eyes, flush your eyes with clean water immediately.

If you still experience discomfort, see a doctor.

NOTICE

If the fluid level is low or high

It is normal for the brake fluid level to go down slightly as the brake pads wear or when the fluid level in the accumulator is high.

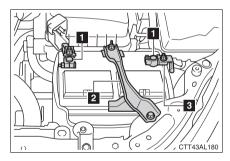

If the reservoir needs frequent refilling, it may indicate a serious problem.

Battery

Check the battery as follows.

■ Battery exterior

Make sure that the battery terminals are not corroded and that there are no loose connections, cracks, or loose clamps.

- 1 Terminals
- 2 Hold-down clamp
- 3 Ground cable

■ Before recharging

When recharging, the battery produces hydrogen gas which is flammable and explosive. Therefore, before recharging:

- If recharging with the battery installed on the vehicle, be sure to disconnect the ground cable.
- Make sure the power switch on the charger is off when connecting and disconnecting the charger cables to the battery.

A CAUTION

Chemicals in the battery

A battery contains poisonous and corrosive sulfuric acid and may produce hydrogen gas which is flammable and explosive. To reduce the risk of death or serious injury, take the following precautions while working on or near the battery:

- Do not cause sparks by touching the battery terminals with tools.
- Do not smoke or light a match near the battery.
- Avoid contact with eyes, skin and clothes.
- Never inhale or swallow electrolyte.
- Wear protective safety glasses when working near the battery.
- Keep children away from the battery.

Where to safely charge the battery

Always charge the battery in an open area. Do not charge the battery in a garage or closed room where there is not sufficient ventilation.

How to recharge the battery

Only perform a slow charge (5 A or less). The battery may explode if charged at a quicker rate.

Emergency measures regarding electrolyte

- If electrolyte gets in your eyes Flush your eyes with clean water for at least 15 minutes and get immediate medical attention. If possible, continue to apply water with a sponge or cloth while traveling to the nearest medical facility.
- If electrolyte gets on your skin Wash the affected area thoroughly. If you feel pain or burning, get medical attention immediately.
- If electrolyte gets on your clothes It can soak through clothing on to your skin. Immediately take off the clothing and follow the procedure above if necessary.
- If you accidentally swallow electrolyte Drink a large quantity of water or milk. Get emergency medical attention immediately.

NOTICE

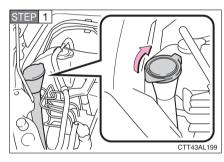

When recharging the battery

Never recharge the battery while the engine is running. Also, be sure all accessories are turned off.

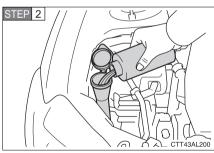

Washer fluid

► For vehicles sold in U.S.A.

If any washer does not work, the washer tank may be empty.

Open the lid.

Add washer fluid.

► For vehicles sold in Canada

If any washer does not work or the low windshield washer fluid level warning light comes on, the washer tank may be empty. Add washer fluid.

CAUTION

When refilling the washer fluid

Do not refill the washer fluid when the engine is hot or running, as the washer fluid contains alcohol and may catch fire if spilled on the engine etc.

NOTICE

Do not use any fluid other than washer fluid

Do not use soapy water or engine antifreeze instead of washer fluid. Doing so may cause streaking on the vehicle's painted surfaces.

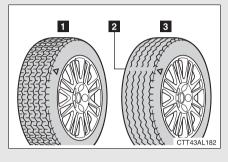

Diluting washer fluid

Dilute washer fluid with water as necessary.

Refer to the freezing temperatures listed on the label of the washer fluid bottle.

Replace or rotate tires in accordance with maintenance schedules and treadwear.

■ Checking tires

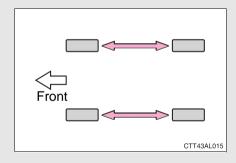

- New tread
- Treadwear indicator
- 3 Worn tread

The location of treadwear indicators is shown by the "TWI" or "\(\triangle \)" marks, etc., molded on the sidewall of each tire.

Check spare tire condition and inflation pressure if not rotated.

■ Tire rotation

Rotate the tires in the order shown.

To equalize tire wear and extend tire life, Toyota recommends that tire rotation is carried out at the same interval as tire inspection.

AWD models: Do not fail to initialize the tire pressure warning system after tire rotation.

■ The tire pressure warning system (if equipped)

Your Toyota is equipped with a tire pressure warning system that uses tire pressure warning valves and transmitters to detect low tire inflation pressure before serious problems arise. (→P. 400)

The compact spare tire is not equipped with the tire pressure warning valves and transmitters.

Installing tire pressure warning valves and transmitters

When replacing tires or wheels, tire pressure warning valves and transmitters must also be installed.

When new tire pressure warning valves and transmitters are installed, new tire pressure warning valve and transmitter ID codes must be registered in the tire pressure warning computer and the tire pressure warning system must be initialized. Have tire pressure warning valve and transmitter ID codes registered by your Toyota dealer. (→P. 352)

Initializing the tire pressure warning system

- The tire pressure warning system must be initialized in the following circumstances:
- When rotating the tires on vehicles differing with front and rear tire inflation pressure.
- When changing the tire size.

When the tire pressure warning system is initialized, the current tire inflation pressure is set as the pressure benchmark.

■ How to initialize the tire pressure warning system

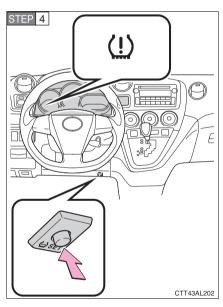

Park the vehicle in a safe place and turn the engine switch OFF.

While the vehicle is moving, initialization is not performed.

Adjust the tire inflation pressure to the specified cold tire inflation pressure level. (→P. 451)

Make sure to adjust the tire pressure to the specified cold tire inflation pressure level. The tire pressure warning system will operate based on this pressure level.

STEP 3 Turn the engine switch to the "ON" position.

Push and hold the tire pressure warning reset switch until the tire pressure warning light blinks slowly 3 times.

Wait for a few minutes with the engine switch in the "ON" position, and then turn the engine switch to the "LOCK" position.

Registering ID codes

The tire pressure warning valve and transmitter is equipped with a unique ID code. When replacing a tire pressure warning valve and transmitter, it is necessary to register the ID code of tire pressure warning valve and transmitter. Have the ID code registered by your Toyota dealer.

■When to replace your vehicle's tires

Tires should be replaced if:

- You have tire damage such as cuts, splits, cracks deep enough to expose the fabric, or bulges indicating internal damage
- A tire goes flat repeatedly or cannot be properly repaired due to the size or location of a cut or other damage

If you are not sure, consult with your Toyota dealer.

■ Replacing tires and wheels

If the ID code of the tire pressure warning valve and transmitter is not registered, the tire pressure warning system will not work properly. After driving for about 20 minutes, the tire pressure warning light comes on after blinking for 1 minute to indicate a system malfunction.

■ Tire life

Any tire over 6 years old must be checked by a qualified technician even if they have seldom or never been used or damage is not obvious.

■If the tread wears down below 0.16 in. (4 mm) on snow tires

The effectiveness of snow tires is lost.

■ If you push the tire pressure warning reset switch accidentally

If initialization is performed, adjust the tire inflation pressure to the specified level and initialize the tire pressure warning system again.

■When the initialization of the tire pressure warning system has failed

Initialization can be completed in a few minutes. However, in the following cases, the settings have not been recorded and the system will not operate properly. If repeated attempts to record tire inflation pressure settings are unsuccessful, have the vehicle inspected by your Toyota dealer.

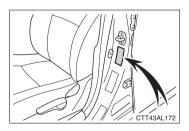

- When operating the tire pressure warning reset switch, the tire pressure warning light does not blink 3 times.
- After carrying out the initialization procedure, the tire pressure warning light blinks for 1 minute then stays on after driving for about 20 minutes.

■ Routine tire inflation pressure checks

The tire pressure warning system does not replace routine tire inflation pressure checks. Make sure to check tire inflation pressure as part of your routine of daily vehicle checks.

■ Maximum load of tire

Check that the maximum load of the replacement tire is greater than 1/2 of the Gross Axle Weight Ratings (GAWR) of either the front axle or the rear axle, whichever is greater.

For the GAWR, see the Certification Label. For the maximum load of the tire, see the load limit at maximum cold tire inflation pressure mentioned on the sidewall of the tire. $(\rightarrow P. 457)$

■ Low profile tires (models not equipped with 16-inch tires)

Generally, low profile tires will wear more rapidly and tire grip performance will be reduced on snowy and/or icy roads when compared to standard tires. Be sure to use snow tires or tire chains* on snowy and/or icy roads and drive carefully at a speed appropriate for road and weather conditions.

^{*:} Tire chains cannot be mounted on 18-inch tires.

■Tire types

1 Summer tires

Summer tires are high-speed performance tires best suited to highway driving under dry conditions. Since summer tires do not have the same traction performance as snow tires, summer tires are inadequate for driving on snow-covered or icy roads. For driving on snow-covered roads or icy roads, the use of snow tires is recommended. When installing snow tires, be sure to replace all four tires.

2 All season tires

All season tires are designed to provide better traction in snow and to be adequate for driving in most winter conditions, as well as for use year round. All season tires, however, do not have adequate traction performance compared with snow tires in heavy or loose snow. Also, all season tires fall short in acceleration and handling performance compared with summer tires in highway driving.

3 Snow tires

For driving on snow-covered roads or icy roads, we recommend using snow tires. If you need snow tires, select tires of the same size, construction and load capacity as the originally installed tires. Since your vehicle has radial tires as original equipment, make sure your snow tires also have radial construction. Do not install studded tires without first checking local regulations for possible restrictions. Snow tires should be installed on all wheels. $(\rightarrow P. 162)$

■Initializing the tire pressure warning system

Initialize the tires with the tire inflation pressure adjusted to the specified level

■ Tire pressure warning system certification

FCC ID: PAXPMV107J FCC ID: HYQ13BCX

▶ For vehicles sold in the U.S.A.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

FCC WARNING:

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

► For vehicles sold in Canada

Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.

CAUTION

When inspecting or replacing tires

Observe the following precautions to prevent accidents. Failure to do so may cause damage to parts of the drive train, as well as dangerous handling characteristics, which may lead to an accident resulting in death or serious injury.

- Do not mix tires of different makes, models or tread patterns. Also, do not mix tires of remarkably different treadwear.
- Do not use tire sizes other than those recommended by Toyota.
- Do not mix differently constructed tires (radial, bias-belted or bias-ply tires).
- Do not mix summer, all season and winter tires.

■ When initializing the tire pressure warning system

Do not push the tire pressure warning reset switch without first adjusting the tire inflation pressure to the specified level. Otherwise, the tire pressure warning light may not come on even if the tire inflation pressure is low, or it may come on when the tire inflation pressure is actually normal.

⚠ NOTICE

Repairing or replacing tires, wheels, tire pressure warning valves, transmitters and tire valve caps

- When removing or fitting the wheels, tires or the tire pressure warning valves and transmitters, contact your Toyota dealer as the tire pressure warning valves and transmitters may be damaged if not handled correctly.
- When replacing tire valve caps, do not use tire valve caps other than those specified. The cap may become stuck.

To avoid damage to the tire pressure warning valves and transmitters

When a tire is repaired with liquid sealants, the tire pressure warning valve and transmitter may not operate properly. If a liquid sealant is used, contact your Toyota dealer or other qualified service shop as soon as possible. Make sure to replace the tire pressure warning valve and transmitter when replacing the tire. $(\rightarrow P. 350)$

Driving on rough roads

Take particular care when driving on roads with loose surfaces or potholes.

These conditions may cause losses in tire air pressure, reducing the cushioning ability of the tires. In addition, driving on rough roads may cause damage to the tires themselves, as well as the vehicle's wheels and body.

Low profile tires and wheels

Wheels with profile tires like 17- and 18-inch tires may cause greater damage than usual to the tire wheel when receiving impact from the road surface. Therefore pay attention to the following:

- Be sure to use proper tire inflation pressure. If tires are under-inflated, they may be damaged more severely.
- Avoid pot holes, uneven pavement, curbs and other road hazards.
 Failure to do so can lead to severe tire and wheel damage.

If tire inflation pressures become low while driving

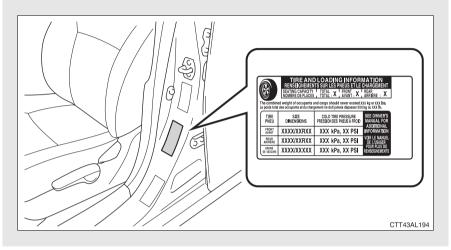

Do not continue driving, or your tires and/or wheels may be ruined.

4-3. Do-it-yourself maintenance

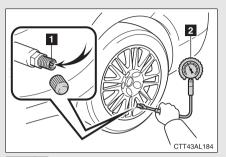

Tire inflation pressure

■ Tire inflation pressure

The recommended cold tire inflation pressure and tire size is displayed on the tire and loading information label. (\rightarrow P. 451)

■ Inspection and adjustment procedure

- 1 Tire valve
- Tire pressure gauge

- STEP 1 Remove the tire valve cap.
- STEP 2 Press the tip of the tire pressure gauge onto the tire valve.
- STEP 3 Read the pressure using the graduations of the gauge.
- If the tire inflation pressure is not at the recommended level adjust the pressure.

If you add too much air, press the center of the valve to lower.

- After completing the tire inflation pressure measurement and adjustment, apply soapy water to the valve and check for leakage.
- STEP 6 Reinstall the tire valve cap.

■ Tire inflation pressure check interval

You should check tire inflation pressure every two weeks, or at least once a month.

Do not forget to check the spare.

■ Effects of incorrect tire inflation pressure

Driving with incorrect tire inflation pressure may result in the following:

- Reduced fuel efficiency
- Reduced driving comfort and tire life
- Reduced safety
- Damage to the drive train

If a tire needs frequent refilling, have it checked by your Toyota dealer.

■Instructions for checking tire inflation pressure

When checking tire inflation pressure, observe the following:

- Check only when the tires are cold.
 If your vehicle has been parked for at least 3 hours and has not been driven for more than 1 mile or 1.5 km, you will get an accurate cold tire inflation pressure reading.
- Always use a tire pressure gauge. The appearance of the tire can be misleading. In addition, tire inflation pressures that are even just a few pounds off can degrade ride and handling.
- Do not bleed or reduce tire inflation pressure after driving. It is normal for the tire inflation pressure to be higher after driving.
- Never exceed the vehicle capacity weight.
 Passengers and luggage weight should be placed so that the vehicle is balanced.

A CAUTION

Proper inflation is critical to save tire performance

Keep your tires properly inflated. Otherwise, the following conditions may occur and result in an accident causing death or serious injury.

- Excessive wear
- Uneven wear
- Poor handling
- Possibility of blowouts resulting from overheated tires
- Poor sealing of the tire bead
- Wheel deformation and/or tire separation
- A greater possibility of tire damage from road hazards

NOTICE

When inspecting and adjusting tire inflation pressure

Be sure to reinstall the tire valve caps.

Without the valve caps, dirt or moisture could get into the valve and cause air leakage, which could result in an accident. If the caps have been lost, replace them as soon as possible.

Wheels

If a wheel is bent, cracked or heavily corroded, it should be replaced.

Otherwise, the tire may separate from the wheel or cause loss of handling control.

■ Wheel selection

When replacing wheels, care should be taken to ensure that they are equivalent to those removed in load capacity, diameter, rim width, and inset*.

Replacement wheels are available at your Toyota dealer.

*: Conventionally referred to as "offset".

Toyota does not recommend using:

- Wheels of different sizes or types
- Used wheels
- Bent wheels that have been straightened

■ Aluminum wheel precautions

- Use only Toyota wheel nuts and wrenches designed for use with your aluminum wheels.
- When rotating, repairing or changing your tires, check that the wheel nuts are still tight after driving 1000 miles (1600 km).
- Be careful not to damage the aluminum wheels when using tire chains.
- Use only Toyota genuine balance weights or equivalent and use a plastic or rubber hammer when balancing your wheels.

■When replacing wheels

The wheels of your Toyota, except for the compact spare tire, are equipped with tire pressure warning valves and transmitters that allow the tire pressure warning system to provide advanced warning in the event of a loss in tire inflation pressure. Whenever wheels are replaced, the tire pressure warning valves and transmitters must be installed. (→P. 350)

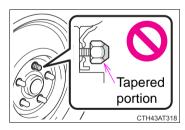

A CAUTION

When replacing wheels

- Do not use wheels that are a different size from those recommended in the Owner's Manual, as this may result in loss of handling control.
- Never use an inner tube in a leaking wheel which is designed for a tubeless tire. Doing so may result in an accident, causing serious iniury or death.

■When installing the wheel nuts

- Be sure to install the wheel nuts with the tapered end facing inward. Installing the nuts with the tapered end facing outward can cause wheel to break and eventually cause a wheel to come off while driving, which could lead to an accident resulting in death or serious injury.
- Never use oil or grease on the wheel bolts or wheel nuts. Oil and grease may cause the wheel nuts to be excessively tightened, leading to bolt or disc wheel damage. In addition, the oil or grease can cause the wheel nuts to loosen and the wheel may fall off, causing an accident and resulting in death or serious injury. Remove any oil or grease from the wheel bolts or wheel nuts.

⚠ NOTICE

Replacing tire pressure warning valves and transmitters

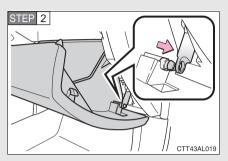

- Because tire repair or replacement may affect the tire pressure warning valves and transmitters, make sure to have tires serviced by your Toyota dealer or other qualified service shop. In addition, make sure to purchase your tire pressure warning valves and transmitters at your Toyota dealer.
- Ensure that only genuine Toyota wheels are used on your vehicle.
 Tire pressure warning valves and transmitters may not work properly with non-genuine wheels.

Air conditioning filter

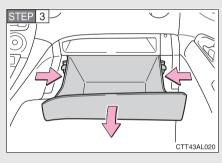

The air conditioning filter must be changed regularly to maintain air conditioning efficiency.

■ Removal method

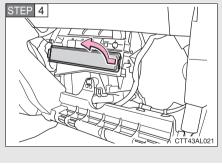

STEP 1 Turn the engine switch OFF.

Open the glove box. Slide off the damper.

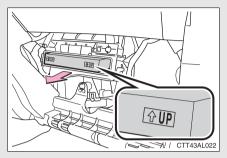

Push in each side of the glove box to disconnect the claws.

Remove the filter cover.

■ Replacement method

Remove the air conditioning filter and replace it with a new one.

The "TUP" marks shown on the filter should be pointing up.

■ Checking interval

Replace the air conditioning filter according to the maintenance schedule. In dusty areas or areas with heavy traffic flow, early replacement may be required. (For scheduled maintenance information, please refer to the "Scheduled Maintenance Guide" or "Owner's Manual Supplement".)

■ If air flow from the vents decreases dramatically

The filter may be clogged. Check the filter and replace if necessary.

NOTICE

When using the air conditioning system

Make sure that a filter is always installed.

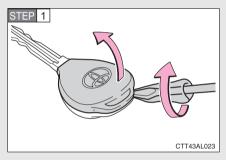

Using the air conditioning system without a filter may cause damage to the system.

Replace the battery with a new one if it is discharged.

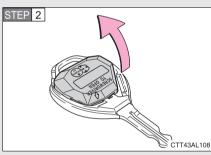

You will need the following items:

- Flathead screwdriver (To prevent damage to the key, cover the tip of the screwdriver with a rag.)
- Lithium battery CR2025

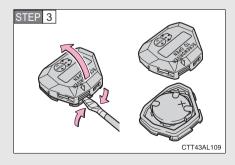

■ Replacing the battery

Remove the cover.

Remove the module.

Open the case cover using a flathead screwdriver protected with tape etc. and remove the depleted battery.

Insert a new battery with the "+" terminal facing up.

If the key battery is discharged

The following symptoms may occur.

- The wireless remote control will not function properly.
- The operational range is reduced.

■ Use CR2025 lithium battery

- Batteries can be purchased at your Toyota dealer, jewelers, or camera stores.
- Replace only with the same or equivalent type recommended by your Toyota dealer.
- Dispose of used batteries according to the local laws.

A CAUTION

Removed battery and other parts

Keep away from children. These parts are small and if swallowed by a child, they can cause choking. Failure to do so could result in death or serious injury.

NOTICE

For normal operation after replacing the battery

Observe the following precautions to prevent accidents.

- Always work with dry hands. Moisture may cause the battery to rust.
- Do not touch or move any other components inside the remote control.
- Do not bend either of the battery terminals.

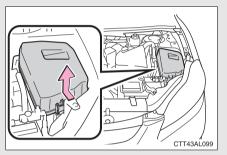

Checking and replacing fuses

If any of the electrical components do not operate, a fuse may have blown. If this happens, check and replace the fuses as necessary.

STEP 1 Turn the engine switch OFF.

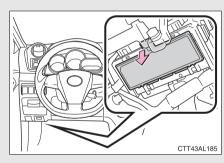

STEP 2 Open the fuse box cover.

▶ Engine compartment

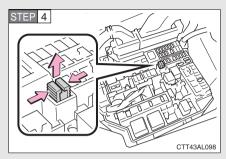

Push the tab in and lift the lid off.

▶ Under the driver's side instrument panel

Remove the lid.

After a system failure, see "Fuse layout and amperage ratings" (→P. 372) for details about which fuse to check.

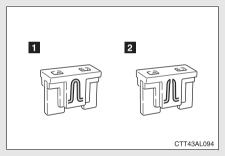

Take out the pullout tool.

Only type A fuse can be removed using the pullout tool.

STEP 5 For type A and B fuses: Remove the fuse.

STEP 6 Check if the fuse has blown.

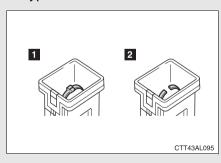

► Type A

- Normal fuse
- Blown fuse

Replace it with one of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.

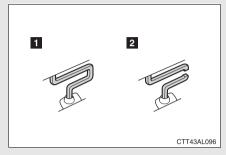

► Type B

- Normal fuse
- 2 Blown fuse

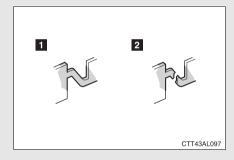

Replace it with one of an appropriate amperage rating. The amperage rating can be found on the fuse box lid.

► Type C

- Normal fuse
- Blown fuse
 Contact your Toyota dealer.

► Type D

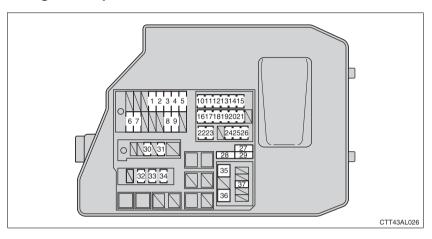

- Normal fuse
- 2 Blown fuse

Contact your Toyota dealer.

Fuse layout and amperage ratings

■ Engine compartment

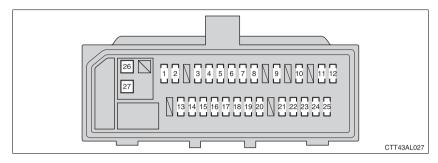

Fuse		Ampere	Circuit
1	CDS FAN	30 A	Electric cooling fan(s)
2	RDI FAN	40 A	Electric cooling fan(s)
3	ABS NO. 3	30 A	Anti-lock brake system, vehicle stability control system
4	ABS NO. 1	50 A	Anti-lock brake system, vehicle stability control system
5	HTR	50 A	Air conditioning system
6	ALT	120 A	Charging system, RDI FAN, CDS FAN, ABS NO. 1, ABS NO. 3, PWR OUTLET/INVERTER, HTR, HTR SUB NO. 1, HTR SUB NO. 3, ACC, CIG, ECU-IG NO. 2, HTR-IG, WIPER, RR WIPER, WASHER, ECU-IG NO. 1, AM1, 4WD, DOOR, STOP, FR DOOR, POWER, RR DOOR, RL DOOR, OBD, ACC-B, FR FOG, SUNROOF, DEF, MIR HTR, TAIL, PANEL

Fuse		Ampere	Circuit
7	EPS	60 A	Electric power steering
8	P/I	50 A	EFI MAIN, HORN, IG2
9	H-LP MAIN	50 A	H-LP LH LO, H-LP RH LO, H-LP LH HI, H-LP RH HI
10	EFI NO. 2	10 A	Emission control system
11	EFI NO. 1	10 A	Multiport fuel injection system/ sequential multiport fuel injection system
12	H-LP RH HI	10 A	Right-hand headlight (high beam)
13	H-LP LH HI	10 A	Left-hand headlight (high beam)
14	H-LP RH LO	10 A	Right-hand headlight (low beam)
15	H-LP LH LO	10 A	Left-hand headlight (low beam)
16	ETCS	10 A	Multiport fuel injection system/ sequential multiport fuel injection system
17	TURN-HAZ	10 A	Turn signal lights, emergency flashers
18	ALT-S	7.5 A	Charging system
19	AM2 NO. 2	7.5 A	Starting system, multiport fuel injection system/sequential multiport fuel injection system
20	AM2	30 A	Starting system, multiport fuel injection system/sequential multiport fuel injection system
21	STRG LOCK	20 A	No circuit
22	IG2 NO. 2	7.5 A	Starting system
23	ECU-B2	10 A	PTC heater
24	ECU-B	10 A	Main body ECU, gauge and meters, daytime running light system
25	RAD NO. 1	15 A	Audio system

	Fuse	Ampere	Circuit
26	DOME	10 A	Interior lights, personal light, clock, wireless remote control
27	SPARE	10 A	Spare fuse
28	SPARE	30 A	Spare fuse
29	SPARE	20 A	Spare fuse
30	AMP	30 A	No circuit
31	MAYDAY	10 A	No circuit
32	EFI MAIN	20 A	Multiport fuel injection system/ sequential multiport fuel injection system, EFI NO. 1, EFI NO. 2
33	HORN	10 A	Horn
34	IG2	15 A	Multiport fuel injection system/ sequential multiport fuel injection system, starting system, IGN, METER
35	HTR SUB NO. 1	30 A	PTC heater
36	HTR SUB NO. 3	30 A	PTC heater
37	PWR OUTLET/ INVERTER	15 A	Power outlet

■ Under the driver's side instrument panel

Fuse		Ampere	Circuit
1	TAIL	10 A	Parking lights, tail lights, license plate lights, multiport fuel injection system/sequential multiport fuel injection system, instrument cluster lights
2	PANEL	7.5 A	Switch illumination
3	FR DOOR	20 A	Power windows, electric moon roof
4	RL DOOR	20 A	Power windows
5	RR DOOR	20 A	Power windows
6	SUNROOF	20 A	Electric moon roof
7	CIG	15 A	Cigarette lighter, power outlet
8	ACC	7.5 A	Outside rear view mirrors, audio system, main body ECU, clock, shift lock control system
9	MIR HTR	10 A	Multiport fuel injection system/ sequential multiport fuel injection system, outside rear view mirror heaters
10	PWR OUTLET	15 A	No circuit

Fuse		Ampere	Circuit
11	IGN	7.5 A	SRS airbag system, multiport fuel injection system/sequential multiport fuel injection system, front passenger occupant classification system
12	METER	7.5 A	Gauge and meters
13	HTR-IG	10 A	Air conditioning system, rear window defogger, PTC heater
14	WIPER	25 A	Windshield wipers
15	RR WIPER	15 A	Rear window wiper
16	WASHER	15 A	Windshield washer
17	ECU-IG NO. 1	10 A	Main body ECU, electric power steering, electric cooling fan(s), shift lock control system, anti-lock brake system, multiport fuel injection system/sequential multiport fuel injection system, tire pressure warning system, vehicle stability control system, all wheel drive system
18	ECU-IG NO. 2	10 A	Back-up lights, charging system, rear window defogger, auto antiglare inside rear view mirror
19	OBD	7.5 A	On-board diagnosis system
20	STOP	10 A	Stop lights, high mounted stop- light, anti-lock brake system, vehi- cle stability control system, multiport fuel injection system/ sequential multiport fuel injection system, shift lock control system
21	DOOR	25 A	Power door lock system
22	ACC-B	25 A	CIG, ACC
23	4WD	7.5 A	All wheel drive system

	Fuse	Ampere	Circuit
24	FR FOG	15 A	Front fog lights
25	AM1	7.5 A	Starting system, shift lock control system
26	DEF	30 A	Rear window defogger, MIR HTR
27	POWER	30 A	Power windows

■ After a fuse is replaced

- If the lights do not turn on even after the fuse has been replaced, a bulb may need replacing. (→P. 378)
- If the replaced fuse blows again, have the vehicle inspected by your Toyota dealer.

If there is an overload in the circuits

The fuses are designed to blow, protecting the wiring harness from damage.

A CAUTION

To prevent system breakdowns and vehicle fire

Observe the following precautions.

Failing to do so may cause damage, and possibly a fire or injury.

- Never use a fuse of a higher amperage rating than indicated, or use any other object in place of a fuse.
- Always use a genuine Toyota fuse or equivalent.
 Never replace a fuse with a wire, even as a temporary fix.
 This can cause extensive damage or even fire.
- Do not modify the fuse or the fuse box.

⚠ NOTICE

Before replacing fuses

Have the cause of electrical overload determined and repaired by your Toyota dealer, as soon as possible.

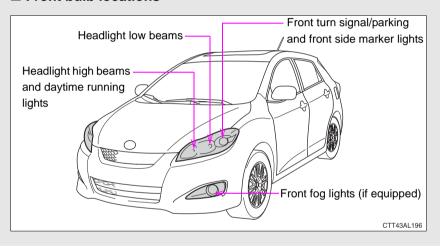

Light bulbs

You may replace the following bulbs yourself. The difficulty level of replacement varies depending on the bulb. If necessary bulb replacement seems difficult to perform, contact your Toyota dealer.

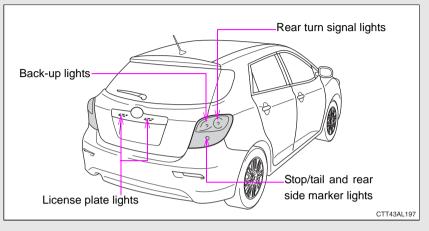

For more information about replacing other light bulbs, contact your Toyota dealer.

■ Prepare a replacement light bulb.
Check the wattage of the light bulb being replaced. (→P. 453)

■ Front bulb locations

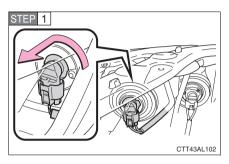

■ Rear bulb locations

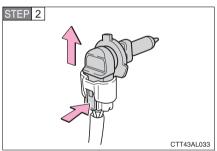

Replacing light bulbs

■ Headlight low beams

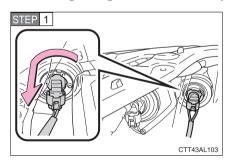

Turn the bulb base counterclockwise.

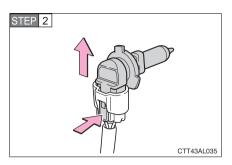

Unplug the bulb while depressing the lock release.

■ Headlight high beams and daytime running lights

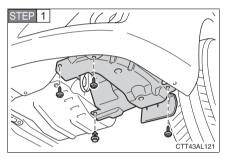

Turn the bulb base counterclockwise.

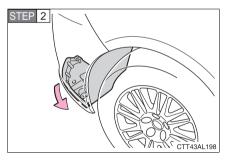

Unplug the bulb while depressing the lock release.

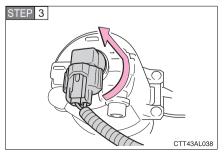

■ Front fog lights (if equipped)

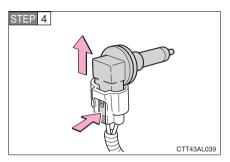

Remove the fender liner bolts and clip.

Partly remove the fender liner.

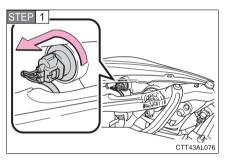

Turn the bulb base counterclockwise.

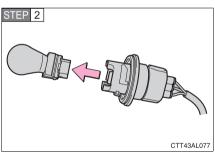

Unplug the bulb while depressing the lock release.

■ Front turn signal/parking and front side marker lights

Turn the bulb base counterclockwise.

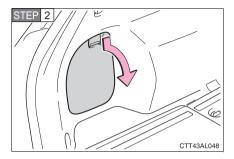

Remove the light bulb.

■ Stop/tail and rear side marker lights, rear turn signal lights and back-up lights

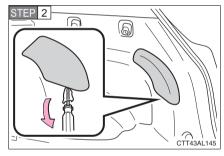

STEP 1 Open the back door.

► Left side

Remove the cover.

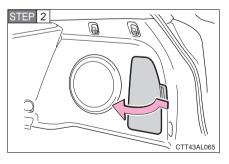

► Right side (type A)

Remove the cover using the flathead screwdriver.

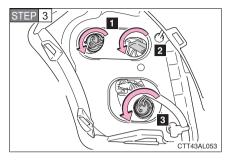

To protect the cover, place a rag between the flathead screwdriver and the cover.

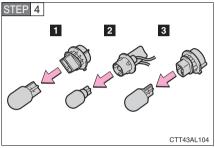

► Right side (type B)

Remove the cover.

4-3. Do-it-yourself maintenance

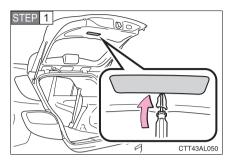

Turn the bulb base counterclockwise.

- Rear turn signal light
- 2 Back-up light
- Stop/tail and rear side marker light

Remove the light bulb.

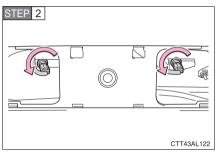

- Rear turn signal light
- Back-up light
- Stop/tail and rear side marker light

■ License plate lights

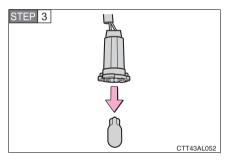

Open the back door and remove the cover.

To protect the cover, place a rag between the flathead screwdriver and the cover, as shown in the illustration.

Turn the bulb base counterclockwise.

Remove the light bulb.

■ LED high mounted stoplight

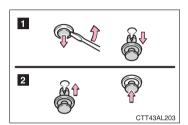

The high mounted stoplight consists of a number of LEDs. If any of the LEDs burn out, take your vehicle to your Toyota dealer to have the light replaced.

■ Condensation build-up on the inside of the lens

Contact your Toyota dealer for more information in the following situations. Temporary condensation build-up on the inside of the headlight lens does not indicate a malfunction.

- Large drops of water are built up on the inside of the lens.
- Water has built up inside the headlight.

■ Removing and installing the fender liner clip

- 1 Removing
- 2 Installing

A CAUTION

Replacing light bulbs

- Turn off the headlights. Do not attempt to replace the bulb immediately after turning off the headlights.
 - The bulbs become very hot and may cause burns.
- Do not touch the glass portion of the light bulb with bare hands. Hold the bulb by the plastic or metal portion.
 - If the bulb is scratched or dropped it may blow out or crack.
- Fully install light bulbs and any parts used to secure them. Failing to do so may result in heat damage, fire, or water entering the headlight unit. This may damage the headlights or cause condensation to build up on the lens.

■To prevent damage or fire

Make sure bulbs are fully seated and locked.
